

What's Working

The overall visual hierarchy is clean, the forest imagery aligns well with the environmental theme, and the "In This Guide" sidebar navigation is a smart structural choice. The green color palette feels appropriate and professional.

Conversion Problems

This is where the design falls short of its goal. There's really only one CTA — "Get Started with MSI International" — buried at the very bottom of page 2, after all the content has been consumed. By that point, most readers have already left. For a piece designed to convert, you'd want CTAs woven throughout: after the Key Takeaways, after each major change section, and mid-page.

Content & Readability Issues

The content density is high but the payoff feels thin. The "Major Changes" section — arguably the most valuable part — is treated very briefly. Readers who came for depth will feel underwhelmed, while those skimming won't be compelled to act. There's a missed opportunity to use concrete examples or stats that make the urgency tangible.

Trust & Authority

There's no social proof anywhere — no client logos, testimonials, certifications held, or case studies. For a consulting firm asking people to trust them with compliance work, this is a significant gap.

The FAQ Section

Only two questions is a missed opportunity. FAQs are high-intent content — people reading them are close to a decision. Expanding this with 5–7 questions and weaving in soft CTAs could meaningfully improve conversion.

Mobile Consideration

The two-column layout with the sidebar will likely collapse awkwardly on mobile, which is worth testing since a significant portion of blog traffic arrives on phones.
